

## Automatic Allround Beltingwagon

### Specialties:

- Free view when loading and unloading from both sides.
- Avoidance of obstructions because of renouncing rods or gates
- Thus no continuous closing and opening in the field e.g. when collecting bales, there is no risk of collision with the ground, since no linkages or gates are present.
- Can be opened in low halls
- Great weight reduction by eliminating unnecessary linkages, gates, hydraulic cylinder and much more
- No noise from rattling gates on empty runs
- All loads (piece goods) such as bales, fruit and vegetable crates, pallets, big bags, or similar are secured and transported in accordance with the regulations.
- Placements and number of straps are variable
- The load is secured in less than a minute (60 seconds)

Through this automatic belting system the wagon is able to properly secure and transport all general cargo goods.
